Personal Summary

A results-driven Data Professional with 2 years of experience in building end-to-end data solutions that optimize operations and reveal critical business insights. I combine a strong foundation in Finance and Economics with advanced proficiency in Python, SQL, and BI tools to translate complex data into tangible outcomes, including significant cost reductions and improved client satisfaction. I am passionate about leveraging data to solve real-world problems and drive strategic growth.

Skills

Programming Languages: Python | R | SQL | DAX

Tools: Tableau | Power BI | Advanced MS Excel | Office suite

Cloud & DevOps: Git | AWS (Certified Cloud Practitioner) | Google Cloud Platform | MongoDB

Techniques: Machine Learning fundamentals | ETL pipelines | KPI definition | Statistical analysis

Soft Skills: Analytical thinking | Requirement gathering | Problem Solving | Collaboration | Communication | Storytelling

Work Experience

Systems Data Architect – Clearway Group – Maple, Canada Sep 2025 – Present

- Partnered with the Senior Director of Preconstruction to architect data models, define core business logic, and establish KPIs that aligned technical data collection with executive strategic goals.
- Empowered the Estimations department to confidently secure 3 new major projects by identifying a 50,000-manhour capacity gap over a 6-month horizon.
- Implemented a unified reporting framework that integrates historical actuals, projections, and forecasts, providing management with a comprehensive view of organizational trajectory
- Orchestrated data discovery with Operations and HR divisions to map and audit 4+ new internal data sources, ensuring high-usability schemas for enterprise-level reporting across a rapidly scaling organization.
- Developed a high-precision HR and Manhour management dashboard utilizing classification and forecasting methods; achieved 90% prediction accuracy in identifying labour and work shortfalls.
- Established "data contracts" between technical and operational teams to standardize ingestion protocols, ensuring high-quality, real-time data delivery for executive decision making.
- Designed and deployed 3 executive-facing dashboards using Power BI, PostgreSQL, and Power Query, streamlining complex datasets into actionable management insights.

Research Assistant – Humber College Research and Innovation – Toronto, Canada Mar 2025 – Sep 2025

- Designed and implemented scalable data pipelines to automate the transformation and enrichment of unstructured datasets used in experimental research.
- Led end-to-end architecture planning, including version control, modular design, and CI-ready workflows to ensure reproducibility across multi-phase experiments.
- Built a production-grade codebase (2,000+ lines) in Python to automate data ingestion, preprocessing, and treatment generation — reducing manual effort by >90% and saving $5,000+ in labor costs.
- Integrated MongoDB and cloud storage solutions to manage high-volume JSON data with schema validation and error handling for robust pipeline performance.
- Enabled collaboration across technical and non-technical stakeholders by developing reusable, well-documented scripts and version-controlled environments using Git.

Freelance Analytics Engineer – Bondi Water Controls – Toronto, Canada Dec 2024 – Aug 2025

- Developed and designed zero cost, scalable data engineering pipelines to collect and analyze data from 1,000+ IoT devices deployed across the Greater Toronto Area.
- Collaborated with stakeholders to define business requirements and build analytics solutions that drove operational efficiency and cost savings.
- Developed a KPI framework aligned with client goals to enable data-informed decision-making and real-time performance tracking.
- Refactored legacy codebases for clarity, security, and performance; implemented caching layers that reduced dashboard load times by 80%.
- Restructured the alert data model (from flat files to nested schemas) and built an interactive dashboard, significantly improving data accessibility and increasing client satisfaction.
- Automated monthly reporting workflows using AWS Lambda and Python, reducing manual reporting effort by over 90% and improving data delivery timelines.

Business Intelligence Associate – OPLinnovate Pvt Ltd – Ahmedabad, India Aug 2022 – Aug 2023

- Collaborated with cross-functional teams in a fast-paced environment to analyze large datasets with Tableau, SQL and MS Excel.
- Initiated efficiency improvements by learning VBA and developing scripts, reducing manual efforts by 60% within 4 days.
- Produced monthly operational KPI reports, interpreting consumer behavior and data trends to guide promotional strategies, driving a 5% month-over-month increase in consumer acquisition.

Education

Humber Institute of Technology & Advanced Learning Toronto, Canada
Postgraduate in Business Insights and Analytics Jul 2025
Awards: Dean's Honour Roll all semesters, Datathon Runner-up, Team lead for capstone project
Relevant Coursework: Machine Learning, Big Data Management, Research Methods, Canadian Business

Ahmedabad University Ahmedabad, India
Bachelor's in Business (Dual major: Finance and Economics) Aug 2021

Project Experience

Ultramar Inventory Tracking System
Skills: Python | Streamlit | Git | Systems Planning | LLMs | Pandas

- Built an automated inventory reconciliation system for a convenience store in Aurora that ingests, cleans, and standardizes sales and invoice data from Excel and PDF files, enabling dynamic stock level updates through a Streamlit-based interface.
- Developed ETL pipelines using Python and Pandas to preprocess structured (Excel) and unstructured (PDF) data, including sales logs and beer store invoices, integrating a Gemini LLM API for PDF-to-CSV conversion.
- Engineered robust data cleaning and transformation logic, incorporating column standardization, type coercion, merging datasets, and generating analytical summaries (sales, restocks) to ensure inventory accuracy and traceability.

Spending Tracker
Skills: Python for fine-tuning LLM model & ETL | MS-SQL for data warehousing (SSIS & SSMS) | Power BI for dashboarding | Git | SQL

- Designed an end-to-end pipeline to categorize transaction data into 21 categories using a fine-tuned language model.
- Built automated data extraction scripts, integrated them with a data warehouse, and implemented a Power BI dashboard for real-time insights.
- Improved classification accuracy by 15% compared to a leading competitor, validated through chi-square testing on unseen data.

Languages

- English – Fluent – CLB 12 (Top 0.01% score in CELPIP)
- Hindi – Native speaker
- Gujarati – Native speaker

Volunteer Experience

Student Advisory Committee Member – Humber College Sep 2024 – Dec 2024

- Collaborated with faculty and students to address concerns, propose new initiatives, and drive campus improvements.
- Demonstrated leadership and teamwork by breaking down complex problems and implementing actionable solutions.

Student Peer Mentor – Humber College Jan 2024 – Apr 2024

- Guided first-year students academically and socially, easing their transition into college life.
- Organized workshops and discussion sessions, fostering a supportive and collaborative learning environment.
